RESEARCH INTERESTS

Continual Learning, Efficient Deep Learning, Dynamic Neural Architectures

EDUCATION

MS+PhD, North Carolina State University Aug. 2021 – May 2028 (Expected)
Department of Electrical and Computer Engineering
Advisor: Dr. Tianfu Wu

Bachelor of Engineering, University of Pune Aug. 2014 – May 2018
Electronics and Telecommunication Engineering

RESEARCH EXPERIENCE

iVMCL, NC State University May 2022 – Present
Graduate Research Assistant
Advisor: Dr. Tianfu Wu

- Working on advancing Continual Learning methods in Deep Learning based Computer Vision

Precision Sustainable Agriculture, NC State University Dec. 2021 – Aug. 2022
Graduate Student Researcher
Mentor: Dr. Søren Skovsen

- Created an image stitching pipeline using Metashape Python API and packaged the code as a Docker executable
- Developed algorithms for automated deduplication of bounding box detections for semi-supervised crop image annotations

INDUSTRIAL EXPERIENCE

Persistent Systems Ltd.

Senior Software Engineer Apr. 2021 – Jun. 2021

Software Engineer Mar. 2019 – Mar. 2021

Intern Jul. 2018 – Mar. 2019

- Trained Deep Learning models for detecting Tumor Cells from microscopic blood scan images
- Increased the Recall by 29.9% and reduced the False Positive Rate by 62.87% over the commercial software
- Trained Multimodal Image and Text models for large scale Document Recognition (500+ categories), with an F1 score of 0.97
- Helped set up MLOps frameworks for versioning and deploying models
- Authored Python SDKs for standardized model training and evaluation

PUBLICATIONS

Brain Tumour Segmentation Using Probabilistic U-Nets

C. Savadikar, R. Kulhalli, B. Garware

MICCAI Brainlesion Workshop 2020

https://doi.org/10.1007/978-3-030-72087-2_22

Towards Designing Accurate FISH Probe Detection using 3D U-Nets on Microscopic Blood Cell Images

C. Savadikar, S. Tahvilian, L. Baden, R. Reed, D. Leventon, P. Pagano, B. Garware

CODS-COMAD 2020

PROJECTS

Pruning Vision Transformers | *NC State University*

Aug. 2022 – Present

- Research project for seminar course “Time/Resource Dependent Learning”
- Working on developing pruning techniques for Vision Transformers

Continual Learning in Computer Vision | *NC State University*

Jan. 2022 – Apr. 2022

- Explored memory – based approaches and their limitations on diverse tasks
- Replicated “Learn to Grow”, a dynamic model – based approach
- Extended the approach to use Stochastic Neural Architecture Search and Unified Neural Architecture Search, and performed comparative analysis

Document Recognition Platform | *Persistent Systems Ltd.*

Aug. 2020 – Jun. 2021

- Trained joint image and text Deep Learning models for document classification into 500+ categories, with an F1 score of 0.97
- Developed MLOps pipelines for model versioning and deployment to AWS SageMaker
- Created scripts for distributed image and text data processing using PySpark for ~350,000 data points
- Improved team collaboration by creating Python SDKs for distributed model training and evaluation

Tumor Cell Detection | *Persistent Systems Ltd.*

Mar. 2019 – Mar. 2020

- Developed Image Processing algorithms for accurate cell segmentation from microscopic blood scan images
- Trained Deep Learning segmentation models for detecting chromosomes in 3D blood scan images
- Reduced false positive rate by 62.87%, increased recall from 72.9% to 94.72% over the commercial software
- Built a fast prediction framework for ~300k images using multi-GPU and multiprocessing parallelism

TECHNICAL SKILLS

Programming: Python, MATLAB, C++

DLibraries: TensorFlow, PyTorch, Horovod, scikit-learn, NumPy, OpenCV, MLflow, PyTest

Data Processing: PySpark (Spark), Pandas, SQL

Tools: Docker, Git, JIRA, AWS Sagemaker, Databricks
